Project Overview

Mylan Labs chose Bunting Graphics to engineer, fabricate and install an iconic architectural monument for their headquarters near Canonsburg, PA.

Originally conceived as a Water Feature by architect Cooper Carry, the 20-foot high aluminum-clad monolith houses three, 4-foot wide glass panels to represent Mylan's "test tube" logo.

During the daytime, these glass panels remain transparent. After sunset, the monument becomes a vivid landmark as the test tubes are illuminated in Mylan's signature blue.

A computer programmable, touch screen, DMX controller provides the means for Mylan to create a myriad of lighting effects, such as flashing or dancing to generate the effect of motion, color changes that can cycle in an ever-changing pattern or fix on specific shades.

More Than a Century of Success.

The Bunting Companies trace their roots back to 1869 in the Pittsburgh region. The company has a long track record of stability and growth based on solid financial footing.

The company's strength is based on a process which is comprehensive enough to cover every detail and yet flexible enough to accommodate changes on the fly. Our team is accountable for every aspect of the process and we involve our client at every step along the way. This means we exceed expectations, identify and manage risks, stay focused on priorities and finish strong.
